Self-Leveling Underlayment Installation

Challenge

Install a floor system using a fast drying, durable underlayment that can hold up to the extreme wear and tear common to hospitals. An added challenge was a very aggressive timeline for project completion. It was critical the floors be completed as quickly as possible in order to keep the project on track.

Solution

ProSpec® Level Set® 300 was able to meet the specification as a cost effective alternative. Level Set® 300 is fiber-reinforced to provide high strength and maximum stability for a durable long lasting floor system. Further, its quick dry time allowed the resilient floor to be placed within 16 hours of application which kept the project moving.

The application went smoothly thanks in part to the exceptional flow characteristics and seamless merging of the product. The contractor could not have been more impressed. The project was completed one month ahead of schedule.

Job size: 500,000 SF

ProSpec Products used:

- Level Set® 300
- Level Set® Primer

Architect: HKS, Inc.

General Contractor: Pepper-Weigand (*joint venture*)

Flooring Contractor: Midwest Tile Interiors, Inc.
